forsakenyes, namehunter was trying to do the same but couldn't contact the guy, and no one had information on how it was done, hopefully PsychoArmy will produce something and go somewhere with this or at least give a tutorial/settings/where it is located on how it is done so someone else can try to make something out of it

For vehicles, it just works somewhat differently. All you have to do is make everything small.....

NH did figure it out (as stupid as it may sound), but was too lazy to relink everything.

The scale option is cool, it's uses overlooked.....but that might change.....
