So I download Renguard the other night and downloaded core patch 1 and 2 and they both uploaded fine and worked when i was playing Renegade. Then i stopped playing and turned off my computer and tried to play again later and my Renegade didnt work. :/ so i deleted all files that had to do with Renegade and so forth. and finally my computer let me uninstall Renegade. So i re installed Renegade and downloaded Renguard and core patch 1 and 2 and Renguard was not recognizing the fact that i had downloaded the core patches. and would only say welcome Enigma524 click Renegade to play! soooooooo...... i dont know what to do. i tried clicking many things and doing other stuff and no of it seemed to get the patches to download or whatever would make them work.
