That happened to me when I added a new gun to a map. When exported as pkg, the hud icon went fubar, when exported to mix it worked just fine.

Also, when using a custom hud.ini to decorate the menus, everythnig works fine when using 2.92. However, when using 3.x, on the purchase screens, only the shadows of text appear.

Edit: While looking at the image, I also noticed the Cost x2 text below the powerplant status.
