Okay, you know how most of the times, you play with many players ingame that have clan tags infront of their names?

For example

{Clan}Inub
{Clan}BoobFais
{Clan}MeSuck

Imagine they are all ingame at the same time and you want to specifically PM one of them like for example, I want to PM Inub but when I start off with /{Clan} then space for PM, boobfais' name comes up and I'm like OMFG I gotta type it again. You should make it in a way like a drop menu or something pops up and you can use the up and down arrow keys to just choose one of the 3 names.

(PS: I hope someone understands my explaination LOL)
