  http://cgi.ebay.com/ATI-Radeon-X850-PRO-256mb-PCIe-DVI-VGA-video-card_W0QQitemZ2 90258544501QQihZ019QQcategoryZ3762QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

There's a card that supports truform.

And here's a really really cheap card
  http://cgi.ebay.com/ASUS-ATI-Radeon-9200-SE-8X-64MB-AGP-Video-Card-New_W0QQitemZ 250288991261QQihZ015QQcategoryZ3762QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

Really, any Radeon X850 or older supports truform with driver 5.8

If driver 5.8 worked with newer ATi cards, then all ATi card would support Truform, because it's just software emulated.

Only the Radeon 8500 had hardware ran Truform, and it sucked cause that card was slow, but truform had very little affect on FPS.
Still does through software.
And it makes the models look much much better.

And ATi cards can enable Anisotropic filtering for Renegade, something nVidia's cards can't do apparently.

nVidia's card are better for just about everything else IMHO, but ATi really had Renegade down.

1) No computer I have access to has an AGP port anymore (so that rules out the AGP version)
2) No computer I have access to has an operating system capable of running CATALYST 5.8 (They are all running Vista, and I am *not* going back to XP in any way)
3) Anisotropic filtering will be working just fine for nVidia cards under scripts 4 (Renegade itself does not currently because it tries to do anisotropic filtering on magnification as well as minification, which produces negligible results)
