So with this new patch, will little things like:

1)lan nickname exploit, etc finally be integrated with everything else for a "final" update + the 1.037 fds so only those 2 files would be needed? (without a bot of course)

2)will it block mods like the radar/hud and even "NoFear"?

And btw, right now does renegade render in DX8 or 9 (with 3.4.4), and would DX10 be possible?
Thanks.
