I have this plugin that someone made for me that uses these commands. This is not used for serverside. Its pulls sound from a database that are all in the always.dat and i get this error (at bottom)

```
  <command name="snda">
    <permission level="3"/>
    <syntax value="!snda &lt;soundfile.wav&gt;"/>
    <help value="Plays a sound heard by all players. "/>
    <enabled value="1"/>
    <hideInHelp value="0"/>

    <group>irc_admin</group>

  </command>

 <command name="sndp">
  <permission level="3"/>
  <syntax value="!sndp &lt;user&gt; &lt;soundfile.wav&gt;"/>
  <help value="Plays a sound heard (only) by user."/>
  <enabled value="1"/>
  <hideInHelp value="1"/>
  <group>irc_admin</group>
 </command>

 <command name="sndt">
  <permission level="3"/>
  <syntax value="!sndp &lt;team&gt; &lt;soundfile.wav&gt;"/>
  <help value="Plays a sound heard (only) by team."/>
  <enabled value="1"/>
  <hideInHelp value="1"/>
  <group>irc_admin</group>
 </command>
```

DBD::SQLite2::st execute failed: no such table: mp3s(1) at dbdimp.c line 412 at brdatabase.pm line 63.

I would just like to know what the error means
