Subject: Skin that weapon =<

I used an existing Quake2 Blaster Model (with skin) for a weapon replacement (pistol). In Gmax I used 'm' and chose the skin (blaster.bmp) and applied it to the new pistol mesh, and it fit perfectly. I put the W3D's and skin into Data, but... the skin doesn't show. I tried converting the bmp to a .dds (DXT1) but I couldn't apply it in Gmax.

Can anyone help me get this skinned?
