yea this EXE wont work on my system... this download you presented me is for older systems... i get a message when launching the applicationg:

Setup has detected the service pack version of the system installed is new than the update that you are applying to it.

you can only install this update on a computer with no service packs installed.

(is there a newer version out there?)

thanks for the help i appreciate it.
im also going to try to import the level edit version into Renx.

but im hopeing for a newer corruption fix download for this.
