Ok, first of all, I re-installed Renegade because it was having issues. I installed the CP2 (FULL) from the downloads section. Also, download the 1037 patch thing. I load up Resurrection click and join a server, after I am in-game I click (ANY) kind of button to move or do anything, and Renegade closes. I can't do anything at all. but look around, if I try to move it closes. I can't figure it out.

Can anyone help me with this issue?
It would be much appreciated
Thank you
