wow I had the same exact problem 2 weeks ago. My Ren got a bluehell and crashed. I had to force shut it...then when I got back in-game, my keyboard and mouse would not work.

So anyway, when I tried to re-install the game, I had this SAME issue; I could not see ANY text whatsoever but you can click the buttons.

I suspected that it was my new LCD monitor. I kinda played around with the display settings but the problem still remained. So getting desperate, I shutdown my comp, disconnected the LCD and connected my old CRT monitor. And when I tried to reinstall, I could see the text as normal! I re-installed Ren and then switched back to my LCD.

I would think there's got to be a better solution than that. There's got to be a setting somewhere.
