I have tried and failed to get the FORUM from the second img more visible, and for the first img, I don't have any good quality images of an orca or flame tank so I used renders of ones out on Google image search. There is an orca and a flame tank in renegade, so its not completely inaccurate. Also, the GDI + NOD images I applied outer glow and inner shadow on to make them look better, but yes, I think they might be from CNC 3, does it matter?

=samous

-How do you write in that renegade font? Would anyone tell me? I have seen it done b4 by scrin (hes not going to tell though) and others...
