I know how the < Zoom works...
But it isn't the case that I zoomed in too much

I was zoomed in alot because the model is always that small on renx,
but now I zoomed out and idk why but I saw my model very small on the screen, then I moved
with the 'Hand icon right below' and it was lost....

Also, when I hold my mouse on the perspective view,
it gives me this coordination on the bottem:
X: [-1,#QO] Y: [-1,#QO] Z: [-1,#QO]

On the other screens when I hold my mouse on it,
it gives the right coordinations, for example:
X: [0,0] Y: [-1] Z: [0,2]
Which is good
