^^ Did you hear what he said? He said that he knew that somebody had already made this before, he just wanted to remake it for himself. Actually, I like the lighter color blue. It is a good solid colour. The darker tones just look awful.

About the ob laser colour, I strictly remember a thread about half a year ago that talked about this. I could not find it in the search but I remember it is a .dds file with other stuff in it. Or actually you might have to change the color of the texture that has something to do with the ob crystal. Like ob_crystal.dds or something like that as I had said earlier. But I just remember that it was really hard to change the color.
