I thought this release was worthy of its own topic here rather than a link hidden in a 10 page debate .

BlackIntel released a working pointsfix script. They clearly said they won't give support for it, but the usage is very straight forward.

What the pointsfix does is explained here: http://www.renegadewiki.com/index.php?title=Pointsfix

There have been many debates about this fix, but they shall not be redone in this topic. The main purpose for this release is so every server owner can test the fix for themselves.

Enjoy! And all credits for this release go to BlackIntel!
