KobraOps wrote on Tue, 12 January 2010 01:44There is just a strange bug that if I tell it to auto login on a given account it says the password is wrong and wont let me long in on it. But if i dont auto login if asks for the password everytime and it logins me in fine. Just dont want to hassle with entering the password everytime
You need to run it in admin mode for it to remember the correct password.
