General HavocDarkeye 35n00b alert- What are the strings.dbb?

Strings.tdb is a file containing strings. The strings are a piece of data containing links to text, sound, or an animation. Basically it is a big table containing a name that makes it easy to link to the file. When you point to any object in game the text below the object is stored in the strings.tdb. Also all EVA announcements and conversations have a string. ACK added strings for broken buildings to make the EVA announce the sound when attached etc.

I didn't add any strings. I changed the existing building announcement strings to point to the proper sound presets I had to create.
