I wrote something simple that runs inside a dedicated thread and every 5 seconds updates the player list like that. It grabs the actual name of the server and saves it, then appends (%d/%d) to it so it looks like:

SERVER_NAME (CURRENT_PLAYERS/MAX_PLAYERS)

as shown in the attached screenshot. With my GameSpy plugin you can set it so GameSpy broadcasts a custom game title for your server different from the one you set for WOL, so the player count doesn't show up in the title of your server on GSA.

Here's the code and how to use it if you want to have it as an SSGM plugin:

plugin.cpp includes:

```
void Plugin_Load() {
    CreateThread(NULL, NULL, Set_Player_Count_Game_Title, NULL, NULL, NULL);
}

DWORD WINAPI Set_Player_Count_Game_Title(LPVOID params)
{
    const char* ServerName = WideCharToChar(The_Game()->GameTitle.Peek_Buffer());
    char tmp[128];
    for (;;)
    {
        memset(tmp, 0x0, 128);
        sprintf(tmp, "%s (%d/%d)", ServerName, The_Game()->CurrentPlayers,
The_Game()->MaxPlayers);
        const wchar_t *Data = CharToWideChar(tmp);
        The_Game()->GameTitle = Data;
        delete []Data;
        Sleep(5000);
    }
    delete []ServerName;
    return 0;
}
```

And inside plugin.h include:

```
DWORD WINAPI Set_Player_Count_Game_Title(LPVOID params);
```

The screenshot shows the RenList v1.0.4 application window. It has a menu bar with 'File', 'Options', and 'Help'. Below the menu bar are two tabs: 'WOL' and 'GSA'. The main area displays a list of game servers with columns: F, IP:Port, Game name, Map, Players, P..., and Ping. The server '82.101.199.64:1337' is selected, showing 'Democrats Gun Control Server (2/20)' on the 'C&C_Canyon' map. Below the server list is a table with player statistics for the selected server, including columns for Option, Data, Player, Side, Score, Kills, D..., Ping, and Time. The players listed are 'carenegade' and 'irany'. At the bottom of the window, there are 'Connect' and 'Refresh' buttons, and a status bar showing 'GSA: Total servers: 38 - Available: 35'.
