Subject: Serial Hash Request

I was wondering whether someone could fill me in on the requirements for a serial hash request.

So for example, is it down to a version of scripts on the client side, or (more likely) does it require a Core patch - and if so which version/cp. Also, to ensure the response is valid would it have to be via an xwis connection or could I guarantee the serial response from a direct connect?

Thanks in advance,
sycar
