tried copying my game.exe file from my 4.0 directory
put it on my desktop, and noticed it had no Shortcut tab in Properties (so i wasn't able to add the DC line)
when i tried opening it, it said "The program can't start because zlib1.dll is missing from your computer. Try reinstalling the program to fix this problem."

that's different from what i saw last time
should i retry with game2 or something?
