shaitan wrote on Mon, 03 June 2013 08:21Goztow wrote on Mon, 03 June 2013 10:39250 \$ per month for a server? When was that? In 2003?
250/month for 7-8 months or so(we got some upgrades recently to bump up the price). That was for everything, windows box that has all the ren/kf servers on. VPS box that has the minecraft/webserver crap/server space rented out to a couple of people.

Crushu it was a simple "we're moving and leaving two people behind". At any rate my own outburst on this forum was done yesterday. I'm not throwing crap anymore at him.

The screenshot shows the vCenter interface for a host named 'Catalyst-Hosting'. The left pane shows a tree view with 'vCenter.Catalyst-Hosting.net' expanded to show 'Catalyst-Hosting' and its sub-items: 'esxi1.catalyst-hosting.n', 'esxi3.catalyst-hosting.n', and 'esxi6.catalyst-hosting.n'. The main pane displays the 'Catalyst-Hosting' summary with tabs for 'Summary', 'Virtual Machines', 'Hosts', 'IP Pools', and 'Perform'. The 'General' section contains the following data:

Category	Count
Hosts:	3
Virtual Machines and Templates:	27
Clusters:	0
Networks:	6
Datastores:	3

The 'Commands' section below the summary includes three options: 'Add Host', 'New Cluster', and 'New Folder'.
