Subject: windows 8.1 not working with my scripts

Hey, I've had windows 8.0 for awhile and have not had any issues.
This month windows 8.1 came out and I downloaded and installed it last night.
Afterwards I started up my ren to play.
It would start but than everything was blinking non-stop and all I could really see was the page beforehand even when I went in game.

I uninstalled my game and reinstalled it.
My game would work fine until I installed scripts 4.0
Once I installed the scripts the same exact problems would arise.

I did change my configuration to every single setting and restarted my computer.

Does anyone have any advice?
