This plugin is a rework of an old plugin of mine that changed spaces from players nicks into underscores when they joined.

It still changes spaces but now it will change any char specified in the ssgm.ini under [InvalidChars] as well. It will also change a player's nick if it contains words listed in ssgm.ini under [UnallowedNicks].

For characters: Add the Characters not wanted in nicks after Invalid=.

For words or names: Add a number in sequence after the word BadWord and then the word or name to look for (BadWord1=someword).

Shown below...

[Plugins]

00=BanSystem.dll

01=Mute.dll

02=CheckPlayerName.dll

[InvalidChars]

Invalid=V.,

[UnallowedNicks]

BadWord1=shit

BadWord2=ass

BadWord3=homo

Admin Message from Host

Your nickname contained invalid characters and has been changed from +King Fred to _King_Fred

Okay

2) [pic2.png](#), downloaded 792 times

Admin Message from Host

The unallowed word <ass> was found in your nickname. Your nickname has been changed from The_assjack to Player762.

Okay
