### Special Key Binds

The ImperialKaskins G-Series and some other MPF maps use special keybinds to do stuff such as deploying vehicles, deploying barbwires and other blockers, deploying mines and even launching Orca's from the Orca Lifter Vehicle.

Note that this also includes the key configurations for <http://www.ultraaow.com> NewMaps 4.x and the mod called CnC Assault. Visit their website at <http://www.ccassault.com>

### Requirements

You must have the special keys.cfg in your Documents\Renegade\Client folder for this to function.

### Where to get it?

Here: <http://keys.ultraaow.com>

### How to install?

Simply run and install it. Do not change the destination folder unless you know what to do with it and it is required.

If you have questions or troubles please post here.
