C4minerI'd estimate that 95% of CS players don't hack

LOL...

Now that's probably correct. 95% of the players who play CS are probably too stupid to know how to hack the game.

Hacking, or reverse engineering, Et Cetera. Going into the files/game and creating a small program, applet, application, whatever to cheat in the game.

A cheater, a person who uses the small program, applet, application, whatever to cheat in the game.

As you can see there is a difference between hacking the game, and cheating in the game.

Now, the percentage of people who actually cheat? I'd say somewhere between 80-90%.
