I just started work on it will be done soon had to install Jasc Paint Shop Pro 7 again I think I may reduce the framerate even more and also the physical size and of course the quality...

Rather than post again I will edit this post with the changes...

EDIT: I have done it I hope you like it now I reduced it from 20fps to 10 and reduced the quality to as low as possible so now it is only 76 kb (didn't need to reduce the physical size though) please tell me if this is any better thanks.
