KrazyfoxxThere's nothing worse than hearing "GDI Power Plant is under attack" while you're a tech inside repairing and someone on the other end of the map is spamming:
"Building need repair"
"Building need repair"
"Building need repair"
"Building need repair"
"Building need repair"

Ever thought about sending a couple of quick Ctrl+9's? Team message of "I'm in position." You should find that most people stfu after you mention that.

You guys should ALL use Renegade AutoComplete, no joke. You can fill the messages with relevant details of WHICH building that is under attack, instead of the vague "Building needs repairs".

I usually send a "repbar" command followed by Ctrl+1, another "repbar" and one more Ctrl+1. This works wonders, it's amazing how many people decide to co-operate because they know which building to defend.
