anyway back to the topic:
this would be a cool addition to the ranking: Use the database from renstat to display the rank! this way you don't have to dump that info in the sqlite database and the rank will be the same as it is on most people's website.

-How about a tank theif option:
!tt XXX ; XXX has been added to the tank theif list

-Wolspy support or something similiar for win32.
This would be the best addition if it happened. Hey, if you run linux, does brenbot show how many players are playing on gsa/ase?
