Alkaline
---- skipped the rest of the post as it was crap-----

RG will only be POPULAR IF, it is decentralized and servers get full control over their servers, other wise you can forget about it :rolleyes:

The server admins still have full control over their servers, they can kick, qkick, ban, change maps, send admin messages, send messages, page, shutdown, restart etc etc. You are somewhat claiming that Renguard removes that ability. There are a number of reasons why it is centralized and we have been over them time and time again - yet you don't listen to the valid points.

Somewhat you, one person with his mighty servers represents the entire community so if you have a problem with Renguard - don't use it, the RenGuard team are not saying "All your servers belong to us, you MUST install Renguard now", they are simply providing a means of keeping cheaters OFF your servers and other servers. Many servers have it installed or are preparing for it, and they will enjoy having cheat free games.

Though that same IP thing was a bit funny :rolleyes:
