alkaline
WOL sucks, play on gsa atleast it doesn't go down every day. :rolleyes:

Then why are you hosting servers on WOL? Arent you contradicting yourself now a bit....

zunnieFirst of all : Open your gamespy and close all the fucking popups you may get. (lol) ehhe

Maybe in your gamespy options @ Renegade, it points to the Renegade.exe ? This COULD
(dunno) prevent RenGuard from showing up?

I used RG icw GSA myself too two days ago or something i just right-clicked the server and
choose Connect to server and everything went ok.

This should work for ASE too as it uses the same cmd-line to lanch renegade.
Try joining the server WITHOUT RenGuard first, once your on the server then close Renegade
again. Now start RenGuard and THEN try to join that server again. I know its kinda :uhhrrm ok:
but then again: for GSA/ASE you must restart RenGuard and the Game anyway rotfl with WOL
you dont have this crap.

[zunnie]

I told him already i shudve mentioned game.exe though , my bad
