Subject: RenGuard is bullshit

I have played today on the Tefon Server with Rengaurd and there always joined people with damack hacks. They destroyed the tanks with one shoot (harvester, mammy, mrls, ...) and the people too. The mods kicked them out but they always came back. So the mods close the server.

Are there new cheats or does the old damage hack still work?

Edit: It is an other cheat because, the cheater can shoot through walls. We was on City_Flying in our Base in the Biuldings and we got killed. Thats was funny.
