Hi all I am still having the crash error in 1.02

I have determined the following

-All who are experiencing the error are xp/2000 or some system built on nt users

-(FOR 1.02) clicking on disable advance text services AND/OR run in 256 color mode will resuklt in no crash (256 color mode makes screen wierd no advanced visual gice u the game option to play but no html page)

-From who I asked (7 people) 6 were using an ATI video card

-Everyone is using dx 9.A or DX 9.B

-Crash file is NTDLL.DLL (Location varies by version number and os)

Notes:

Try to turn off the advanced text first then if not try colors and finally both, it worked for me (you will see no page just the you've connected mnesage then hit renegade and play as normal)

Someone plz sticky this or confirm it

@Mac or other admins hanging in rg_support on irc @ n00bstories if any1 needs me
