Hi ive dl n installed BRenBot 1.35 and SSC 1.02 its the first time ive used nething like this after seeing it on a cppl of servers we dedided to give it a try. Im running it on a dedicated server ive got it working or so i think lo, some of the commands dont seem to work ie !Adminlist !Modules etc. Do i have to add modules into the prog sepratley?. Ive set up admins of should i say mods so i know they are working as when they join is shows them as mods. Also the recodmendations thingy dont work ie most kills mvp etc etc. Just wondering if i need to do somthing else or add stuff to the prog sorry like i said im new to this n not very good with sorting this sort of stuff out lol more a happier just in game fragging pps n hate tech stuff 2 old to learn nwe things lol. Neway hope some1 can help
THX
