xptekMost the reputable servers are running Renguard.

UGIN isnt yet, but that is the server host's decision...i spoke to Renx the other day (yesterday) gave him a few ideas i had in my head that renguard might be able to do or not...my problem is since the servers are new and stryderMX is still fighting the glitches in the Renegade Command bot he designed i didnt think putting renguard on an unstable bot server a good idea.....But i still am willing to try it out.

a server that doesnt run RG doesnt make it less reputable xpetk...but it will sure help me see who i've always suspected as cheating really cheats. And i wanna snipe knowing a/ it was a lag kill or b/ that person is better than me.
