This is an application that i've been working on just recently. It will essentially be used to locate your westwood online renegade buddies without the need to open renegade itself.

Screenshot: http://www.spliff.wideboys.co.uk/files/pictures/buddylist2.gif

There are a few major benefits of using this:

a) There is practically no restriction as to how many buddy names you can add. You can greatly exceed the existing WOL restriction of twenty entries per login. In actual fact, you will be able to have as many as 32767 entries if you somehow find the need to!
b) The application is already much faster than the buddy list you've been used to within the existing Renegade interface.

I'm gonna need a few pre-release testers as i'm not completely sure how the program will react with different systems/firewalls. If you would like to help with the testing, please either speak with me in #n00bstories or PM me with your system specs and contact e-mail address.

Thanks.
