Hi,

I'm using Game URL Starter to create a link from a website to launch into a Renguard Server, however when i click the link, the Renguard Application opens, it launches the game and then it kicks saying you need Renguard.

Any Ideas how this can be fixed, not really that important, but am curious to see if i can get the link on our site to launch Renegade properly.

http://callofduty.org.uk/GameStarter.rar = Link for launcher

renegade://80.68.47.69:4848/   = Link to server once launcher installed.

Thanks for any assistance.

Van
