It is in the taskbar and the tray when it launches Renegade, from the RG main screen I can minizmie it directly to the tray only but when RG launches Renegade it goes to tray and taskbar. When that happens, if I click on the taskbar nothing happens. I think it may be the reason why my RG is using an excessive amount of memory when I play Renegade but when I put it to the tray manually it uses close to nothing. I already have 1.03.
