The tutorial is also available at <http://www.nodnl.net> . If you are not sure on how to install the scripts as it doesn't tell you in detail on Laubi's tutorial then take a look at the "Installing Scripts" section on the teleport tutorial at <http://www.nodnl.net> . Baring in mind you will only need to copy the one file called "Scripts.dll" if you don't want to use the custom scripts. I have got the harvester working by using the tutorial and it is quite simple to get working. If you do have any problems getting it working I can help you.

P.S. Do we know for sure that this script is working on the FDS? The two tests we did the harvester had to be killed before it would follow it's waypath. Just a query because we tested Gobi and that uses "PDS_Test_Harvester" script and we had to kill the harvester to get it to start pathfinding.
