If your Rg 1.01 doesnt work and it close itself and you cant do anything about it..

Just go to your Renegade file (mine is D:/Westwood/Renegade)

Then find your game.exe and right click on it and do the follow

After that run your Rg 1.01 again and it should work fine

If it still doesnt work. You need to download htmllayout.dll and then it will work for sure

lol

have now RG 1.01 (or what ever downloadid today after RG 1.0 dont updatet) and the crush under XP doesnt fixed !!!!!!!!!!!!! fter Starting renguard it closed with an error , nothing else . I unistalled this and now it is so that nothing will be work @ renegade . In my Oppinion RenGuard is the biggest Bugtrash i ever seen . Close this Projekt and make a real thing taht works .

PS i ask we what noob has testit it ???????? No Problems detected ? I detect Problems every minute with using RenGuard !

FYI:

In english:
Right click on game .exe then click on the "Compatibility" tab
Yhteensopivuus meand compatibility (Well I learned something today)

The checked box should mean something along the lines of "Enable Compatibility mode" (Don't
ask me what the hell yhteensopivuustilassa means)

I dont know either what Yhteensopivuus means in english, but it looks same in english menu and
finnish anyway

hey xXx

the best ting u can do to avoid renegade from not working if sometjing like this with renguard is
after u installed the game and the patch make a copy of the renegade.ece and game.exe and put
them in a another folder like tat u can copy them back and them back if u uninstall renguard it

---

works i had to try it.

Question, what kind of n00b fucktard shows off about cheating? Piss off back under your rock. On topic I have to say even though I'm running XP I didn't have a single problem with 1.01, I just opened RG, let it update and everything worked exactly as it should. Now if only EA could do the same with WOL...
