Good day.

I have a considerable problem with renguard. I installed it and played with v. 1.00 some times and it worked fine. Now that a new version appears to be out, my program downloads it and asks me to restart the program.

However, after I did that the program again downloads the update. And again asks me to reboot it. Etc etc etc.
I tried rebooting the pc, but it won't work. Every time, another reboot is asked and another download made. every time I start renguard, it still is named v 1.00.

Since this kind of trashes my renegade experience I'd like to ask if there is some way this can be fixed.

 Yay...I can't wait to be able to take off this compatibility mode, it puts everything onto 1 line for me.

A fix has absorbed the time of the team, expect it. They should release a new ver once it is verified, rather than when some demand it. If your having problems with it, I bet 1.02 will solve your O/S issues with the app.

Kjld4M, my reply is not intended to offend, just keep posted.
