First sometimes i get the following message when iI start renguard:

http://home.arcor.de/_damned_/Error.jpg

Maybe someone knows what i can do about it...

And second and which is more important my Renegade just quits during gameplay , when I play online , it dosen`t matter which sever.
I changed my Videocard drivers I set my setting low. It quits out without any error message! I dont know what it is. maybe someone can help me,
I hope so...

I also installed it like I should renegade then the patch then renguard then core Patch....I dont have the 10€ Version. so i dont know!!

I got a ATI Radeon 9600 Pro from Tyan maybe someone knows issus with this Video-Card!!

Best reguarts Vercetti

For the buffer overrun problem, use the search function, I'm sure there have been solutions already suggested long ago.

As for the "10€ Version", I have no idea what the hell that is, but in those games are your typing F8, ex, space and enter to get extras? Because the Core Patch changes that to do "exit" and immediately exit the game, and you have to type "ext" to get your extras. Or is it something else?

Do NOT delete game.exe!

did you get any new hardware
Router?
Memory?
was your video card new?
old power supply?

If you have a router try connecting directly and then disable any firewalls you might have and see if you still crash.
