Putting a file from one PC to another? My PC's are connected by a router. I'd send it by e-mail but my e-mail is screwed up big time on this PC. Is there any other way?

Just create a network share and copy it over...

if you are using windows XP;

1) copy file to sent into shared documents

2) go to my computer and ensure shared documents is actually shared

3) go to the other computer and open My Network Places. the shared documents of the first computer should be shown (it may take 10 seconds or so to find it)

then just copy and paste the file as normal.

I mean I have 2 seperate PC's there connected by a router, I need to get a file from one PC to another.

Edit:

Nvm: Transferring via bittorrent.

well what i said before should work anyway, the router should act as a network hub as well, enabling file / printer sharing between computers connected to it.

This truly is simple.

For a simple way, download this (dont worry, i just made it, no viri or anything of that sort.

<http://files.xeonteam.com/ComputerName.rar>

It should display your computer name in the top textbox, then in the listbox it should state all the other networked PC's including yours. Now open up run and type

\\ then one of the computer names from the listbox.

eg:- Mine would be.

\\home

EDIT: I updated the version so that now all you have to do is double click the computer's name in the listbox.

Nopic, what are you trying to do? I have no need to post a trojan, virus or worm on here. Paradox, have you ran the app? If so have you noticed your computer been taken over by little green men in a cradboard box? No, then thats answers the question.
