well you see i am using the m06 terrain to make a roleplay map, i edited the purchase settings and the pictures inside the pts of the characters, when i exported as pkg, everything works fine, then i export as mix but none of the character/purchase settings i applied exist

you have to create a temp of the purchase settings, editing them wont work because renegade will read the originals from always.dat when using .mix format.

the characters work now but there is still a problem...for example i replaced the shotgunner with the M04 ship captain, and i gave him a remote c4, upgraded his health and speed and so forth, these changes are not present in the map, i went to look back for the m04 ship captain under soldier presets and it shows the changes there

There are like 3 different PCT settings:

- Main PCT with the zero infantry
- Infantry PCT Screen
- Vehicle PCT Screen

Make sure you targetted each temp to the appropriate logic.

If you are testing as a mod package, sometimes there's a glitch within the exporting. If you have Renegade running, close that and LE down and delete your mod package file out of the data directory. Re-open LE and export, this happened to me a few times so if you constantly make changes and the changes don't take effect, this could help. Other than that, trail and error. Good luck!

I know this is a little tangent off the topic, but does anyone know about the Mutant PCTs?

There's the obvious:

GDI

Nod

And there's the other 2:

Civilian - Neutral party, doesn't attack GDI or Nod.

Mutant - Hostile to all.

Makes me wonder...does the Ob/AGT attack you if your neutral?

I don't know if servers have them, but that's what's coded into the game.

if you want to change anything at all it must be done by making a temp and editing that. otherwise ren will use its default settings (this is for .mix maps)
