One of my resold servers had some problems due to multiple errors by various parties. Basically it's a software problem and it just needs an OS reinstall to be in tip-top shape. However, the person who has this server doesn't want to deal with it and wants to cancel and eat the monthly cost for August that he's already paid me.

However, I would rather resell this server to someone else who might want it and hopefully give this person some of their monthly cost for August back instead of wasting it.

Therefore, I am offering this server to you all.

Specs:

Intel Pentium 2.4 GHz (no hyperthreading)

512 MB DDR 266 RAM

100 mbits uplink (upgraded from standard 10mbits)

80 GB Hard Drive

1200 GB bandwidth/monthly

This server (with 1024 MB RAM) would go to a new customer of Server Matrix for \$159 monthly with \$0 setup. I am able to offer this server for \$129 monthly with \$25 setup (to cover the OS reinstall that is currently necessary).

If you are interested in this server, please PM me for details. Thanks!

I assume your home c0nnection is too.

That pc could handle 40 players. Easy.

If you want to go with the best go with a Itanium or Opteron but most of them still rent Xeons.

You don't use these sorts of servers the same way you use your home computer. This box would handle a fairly busy site with no problems, or a 32 player Renegade server... or a combination.

I think we have someone who wants it, though...
