Ok, I was just wondering if it is possible to scan a web-accessible directory to find all of the folders and files in it. If so, how can this be done? Thanks for any help.

Oh.

Well it could be used for that end.

Yes, Use getright.

One of the most useful things i have ever used.

It doesn't work right. . . There's files that I know are in the folder that are not showing up. I'm trying to get all of the AIM quick buddy files and put them on my server to see if I can get onto AIM quick buddy from my server. But I think I'm missing a couple files or something. Would it even be possible for what I'm thinking of to work, or has someone already done this or something?

Well its pretty self explanatory to me, just for reference:

im using (Version 5.2b) However ive been using it for years on just about evey version.

To launch select from the menu, or hit Ctrl + b at teh main downloads screen.

Each folder icon is a link on that page, click it to follow the link to the next directory.
