Subject: Unable to run RenGuard on Cedega 4.4

Well, it was really great for me to get Renegade working on Cedega 4.4 (on top of SuSE Linux 9.3), yet RenGuard doesn't work, it just spits out debug errors.

May you please make it compatible with Cedega?

We'll need a lot more information than just "it doesn't work".

First and foremost, what debug errors are you getting?
Secondly, I don't want to speak for everyone, but I doubt everyone has access to a machine with Cedega 4.4 + SuSE Linux 9.3. Even if they did, why would they want to play on there when they could play just fine on a Windows XP box?

In any case, the error messages would be the most helpful at this point.

Some boxes CAN'T run XP...

You have to wonder... if the box can't run XP, is it worth installing Renegade on it? XP doesn't have that high of requirements...

I'd LOVE to play Ren on an AlphaServer ES47 (which CAN'T run Windows PERIOD)...keep in the mind that the ES47 can hold up to 4 1GHz EV79 Alpha CPU's and >4GB of RAM...

Being a linux person, It's good to see someone trying to play Renegade on Linux. To be honest, I havn't tried Cedega since the days when it was called WineX. I just did some reading and it seems to have come a long way since the last time I used it, however I did read about specific problems it has particularly when a game or application has an embedded IE window (which RenGuard has).

That being said, it may not work under Cedega until Cedega gets a fix for that particular problem. I would be interested to know if Cedega runs Renegade itself (without RenGuard) fine or not. If you have the ability to test it (try running 'cedega game2.exe') and report back that would be cool.

Renegade runs fine with Cedega.
In fact, with a little tweaking you can get it running in a vanilla WINE install
