i got a problem, i cant connect to the rg network cuz it always says that my always.dbs is bad or corrupt.

i already tryed:  
reinstall renny (multiple times)  
reinstalled rg (multiple times)  
downloaded the always.dbs from >>> H E R E <<<  
used the always.dbs of a friend

sometimes i can connect to the rg network but after a while rg kicks me for a bad/corrupt always.dbs and says i am cheating

i did search inside this forum and google, but all i found is what i already did try ... any other options ?

cuz its not fun to play without rg, it feels like i am playing a shareware version of renny ... cant use all commands and those annoying ingame-popups all the time.  
if you can use rg it improves renny, but it is almost unplayable if you can not use it.

//edit  
im using win xp prof and the latest drivers for my GF card

RenGuard tells me my Always2.dat is corrupt at least twice a day, i just continue to replace it from the link you posted, just try a couple of times.

If that doesn't work go for a full re-install.

this is the latest RG message:  
"RenGuard"[17:52] Trying to connect to server #1...Connected  
[17:53] Secure link established.  
[17:53] Welcome to RenGuard , DethOIVI!  
[17:53] To launch Renegade, please click 'Renegade'.

[17:53] WARNING: Model Textures (Skins) have been detected on your client! You will not be able to join a pure server.

[17:53] Bad/Corrupted file data\always.dbs has been found in your renegade directory

[17:53] Bad/Corrupted file data\Always2.dat has been found in your renegade directory

[17:53] Disconnected from RenGuard network

so now its not "just" the always.dbs, its also the always.dat

and btw, i already reinstalled renny and rg 3 times now

Have you deleted all the folders + registry entries before you install it again?

i did not clean the registry, i guess if i uninstall something it removes its registry entries ... the folders were removed ... i just saved the maps in an other directory.

i planed to reinstall windows tomorrow, ... i hope that will help

if not, i am afraid i have to stop playing renny cuz of rg, cuz i am not willing to play on servers where i get a popup every 5 minutes and where i cant use all commands like others.

hope that wont happen, playing since the first day ... would be crap to be forced to stop playing it cuz of a buggy 3rd party anticheat.

I find that my always.dbs file usually goes corrupt shortly after using an objects.ddb file. My suggestion to you is to make sure that you're not using any such files. Other than that, always.dbs seems to correct itself after a few games (without running RenGuard, of course, since RenGuard will prevent you from playing those games).

the only thing i have installed are the reborn inf moddels.  
but im using them since ages and never had problems

maybe i try without them tomorrow, even if i really like them
