An updated version of the W3D importer

Fixes include:

- -Proper importation of Renegade materials.
- -Objects that used the same material in Renx will now use the same material in max.
- -Imported Materials are automaticaly imported to the material editor.

Future fixes include:

- -Animations.
- -Other Various tweaks.

Script Originaly created by Seagle Edited by Me

Hope this helps anybody

Is this for 3DS Max or Gmax?

If it's for 3DS Max I never even knew there was a W3D importer available for it... I always used .3ds as a go-between format

You can import from it though, with the right tools. Great program though, finally I can get things from gmax back to max

It would be nice if someone fixed the W3D importer for Gmax/RenX that way... It's annoying to re-texture everything when extracting something from a W3D file.

I found it out maybay late

if sombody is still intrested, but

the file on top is a renx script, you need to open the script

I dont think it matter where you place, if you can find it.

If you are in renx, click on the toolbutton(hammer) then on MAXscript then Run script, find the file W3D CC-imp-V1.16 (where ever you placed it) run it, then you can scroll down and simply click on Load W3D object

It slould work now

I think there is a max-w3d exporter but you have to pay for it. I think

Import it to 3ds, do what you want, export it to ren X, export it to w3d.

You want it so you can do that.

Yo Halo, we need maps for the game convention, anything you would share? If you could edit your map with the temple with nod symbols... Maybe our team could add lightmaps after to it.

To all mappers: We need map asap!

Hey renardin

I've replied to PMs from various people on your team about using that map but I've had no response, sure it's ok for you to use Ancients if you want adding light maps what ever you want.

I'm not sure how you want me to edit it to fit reborn, maybe it would be easier for me to just give you the files and you do what you need too

Whats this game convention you mentioned all about?

Hiya,

Sorry for bumping this topic after nearly 2 months, but I couldn't find other places for my query...

Tried this very nice tool out tonight and I really like it, very easy to use! It was a pain to work out where the damn thing was in max, but I found it eventually!

In the past I have used similar importers for w3d by Eric Morin (Abjab) / Dante and Coolfile and they have offered functions to either add them to the toolbar or load via keyboard shortcut.

In this version was just wondering whether this plugin offered that function as I have just been ripping my hair out trying to find it in the list!!

Cheers

Andy
