I released C&C_Rome today. It's an infantry only cnc map (aka simmilar to hh2) loosely based on roman or greek architecture (actually, it ended up being more like just ancient ruins/etc. but I figured I'd keep the name).

I started it a couple of years ago, so don't expect anything fantastic, but when I started looking at my old maps again, I figured it'd make a decent infantry-only map and decided to finish it.

Check it out here

Ok i played it now, looks good. at the moment i only have one suggestion, i thin that the buildings should have less health because you can plant mine after mine after mine on the and it will barely hurt them.

Dunno yet. Fully-interior maps (or almost, anyways) that aren't just caves are kind of hard to do, and not something I'm going to take lightly. Haunted House 2 took a few months to do, and to make a truely worthy successor, it'd probably end up being more work than it's worth.

Are the Tiberios boxes in this map SUPPOSED to increase your max health by 100?

They do by 25% each. I suppose it's a tad excessive, but I forgot to modify the powerups to give armor (so it'd be like 5-10% health and armor).

If I find enough bugs to release an updated version I'll fix it.

I've managed to set up a server so you guys can play on the maps while I'm at work. It doesn't seem to use a lot of bandwidth, so I don't think the admin will care if I let it hit 8 or 16 players or SO.

I'll have it up occasionally on weekdays, somewhere roughly between 4pm EST and 11:30pm EST.

It's up now, hosting rome.

I demand you do C&C Pompeii next, with volcanic ash raining down and dim lighting with lightning.

eh how about this. If I do a larger full-cnc-mode version of rome, I'll do it with a volcano and call it Pompeii, with ash and toppled buildings and maybe some statue-people in crazed death positions.

Lightning? I'm not sure sure I know how to do that.

I'm not sure I feel up to the work though. We'll see.

I figured out how to host on WOL at home. Look for "jrpserver" hosting various maps of mine (primarily rome for now).

I have wolspy up but I can't figure out how to get it to broadcast properly.

(Honestly, I need a concrete list of all ports to use/open/forward/whatever).

Well, while I have no official plans to do a new map yet, I've been toying with the idea of at least building a "rome pack" gmax file to contain objects I might use in a Pompeii type regular cnc mode map. This is a new column design to replace the blocky old one. Rings in at about 140 polys, uses the same texture that the old columns used. It stands 7 or 8 units tall (evil memory is against me today).

If I go get a decent rome pack going and still don't feel like making a map based off of it, I'll release the pack to the public.

I'm still coming up with various structural ideas. Here's a pic of some arches.

Anyone have some google images based suggestions for water fountains? preferably something circular with a large center object.

Those are looking great. I'm looking forward to playing the C&C mode version.

Ok, I'm more or less going to do Pompeii. See this post at the tiberios site:

Nice, I'm getting excited. I'm a huge fan of your maps.
