It doesn't matter rather I make a server on a public network, or what game I do it with, nobody can see the servers I make except the people on my LAN. It's got me kind of baffled because I disabled firewall and enabled DMZ, to no avail. I figured I would come here since alot of people here seem to have good knowledge on this sort of thing.

Any help or suggestions would be greatly appreciated.

If you mean FDS, change GameType to WOL.

GameType = WOL (in server.ini)

If you mean just Host Game, do not do it in LAN, do it in Multiplayer Internet -> Advanced Game Listings.

I'm not referring to just renegades, it is with every game. It's some sort of router issue I'm sure but any help would be appreciated as I feel I have tried everything. Thanks.

Likely ports. You have to look up the port numbers it uses, and forward them.

EDIT:

Also during your gaming turn off all firewalls.
